

# SC1 Cleaning Maintenance Guide

## Basic Care & Maintenance

Dust and other foreign matter on the clear plate of the reading window can impede code input, so regularly check for it and remove it as the usage environment warrants.

- To clean the plate, first blow the dust away with an airbrush. Then, gently wipe the plate with a cotton swab or the similar soft one.
- If sand or hard particles have accumulated, never rub the plate; doing so will scratch or damage it. Blow the particles away with an airbrush or a soft brush.

## Care & Maintenance with alcohol disinfectant and washing soap

1. To wet a soft cloth with our confirmed disinfectant or washing soap.
2. To wipe away a product body and a reading window softly
3. To wipe out a remaining disinfectant or washing soap on a product body and the reading window completely.

(Except for USB cable)

### 【Caution】

- In case of using liquid or spray type of disinfectant and washing soap, do NOT dip or directly spray it.
- Do not soak disinfectant, washing soap or humidity into the product.
- In case of product white or yellow discoloration, stop using disinfectant and washing soap immediately.

## Our Checked Disinfectant and Washing Soap

We have confirmed that we have not see any appearance, function and performance damage on a product based on a wipe-away testing to be done once a day.

- 91% Isopropyl Alcohol Solution
- 0.5% Hydrogen Peroxide Solution
